

Monitoring Bridges by GNSS

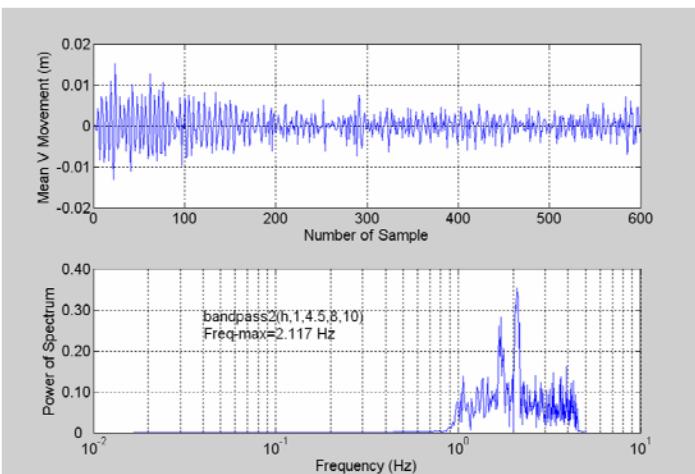

Dr Gethin Wyn Roberts,

Chris Brown, Dr Oluropo Ogundipe

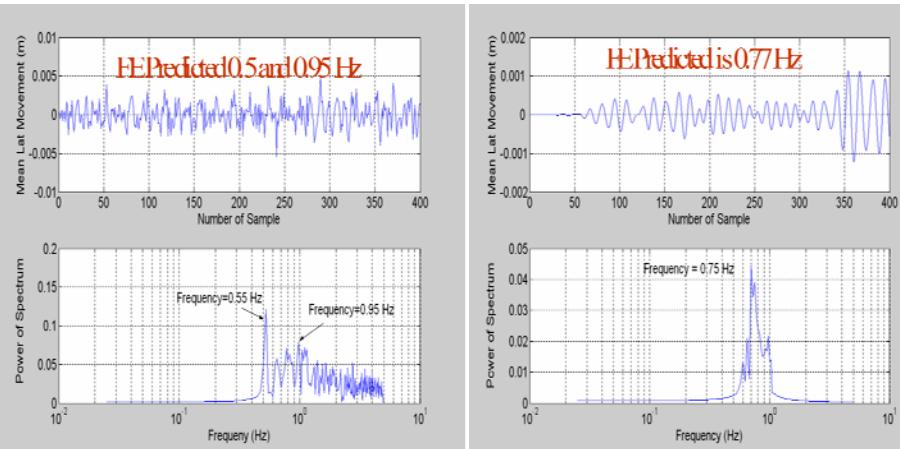

- 7 Bridges, case studies
- Large and small suspension bridges, one viaduct, one cable stayed bridge
- New tests on the Severn Suspension Bridge, antennas on cables and towers

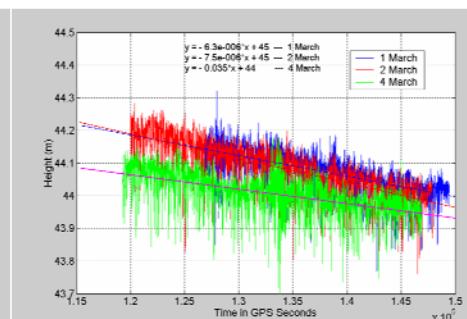

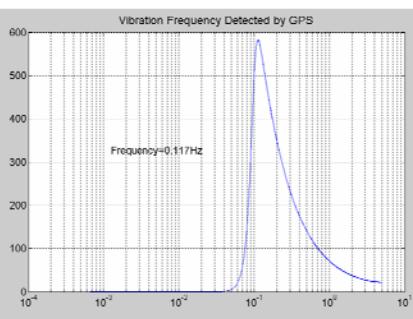

Nottingham Wilford Suspension Bridge

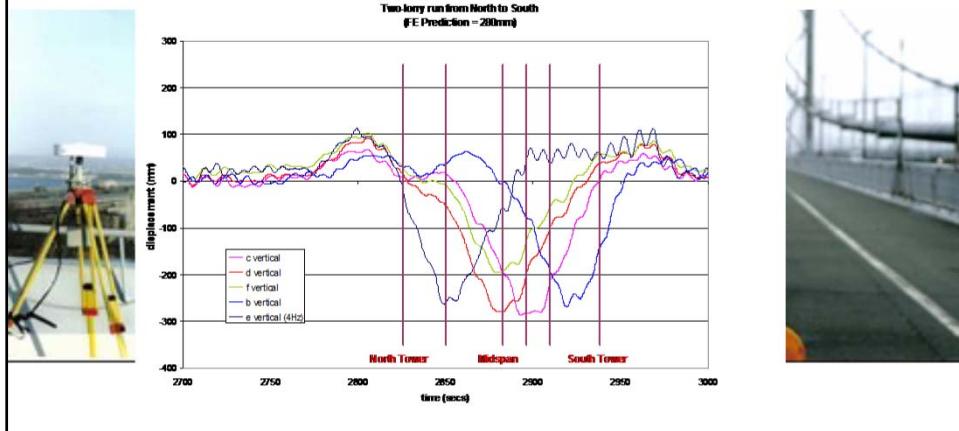

London Millennium Suspension Bridge

Humber Bridge

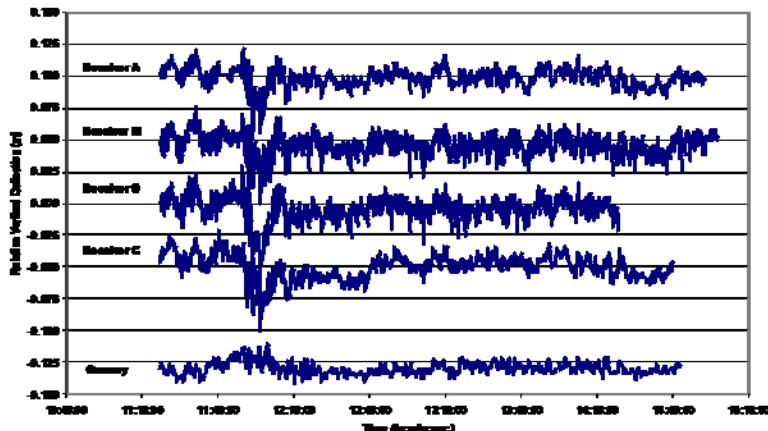

Forth Road Bridge

Avonmouth Viaduct

Height Results

Seohae Grand Bridge, Korea

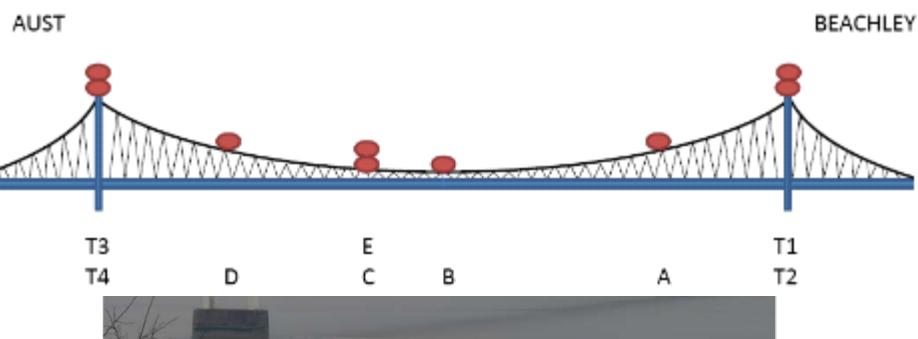

Location: From Kyeonggi-do Pyeongtaek-si
Poseoung-myun Naegi-ri To Choongcheongnam-
do Dangjin-gun Songak-myun Bokwoo

Severn Suspension Bridge

9 GNSS receivers

2 reference stations

Reference station and backup

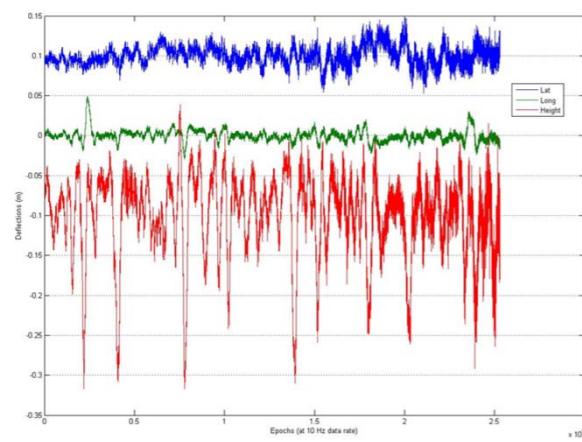

Post Processed OTF

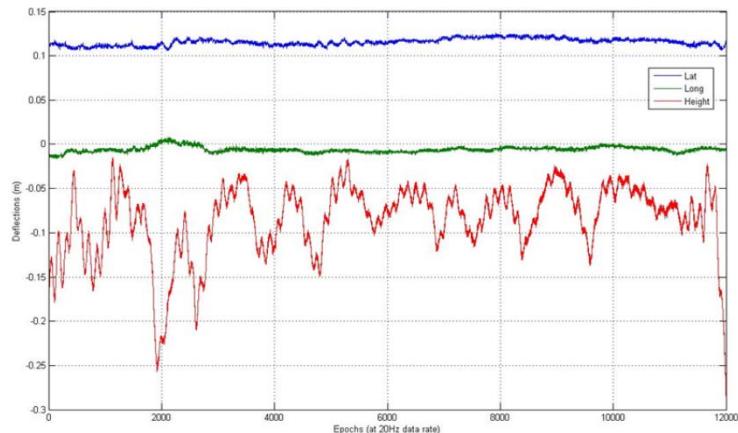

Antenna locations, tower and cable

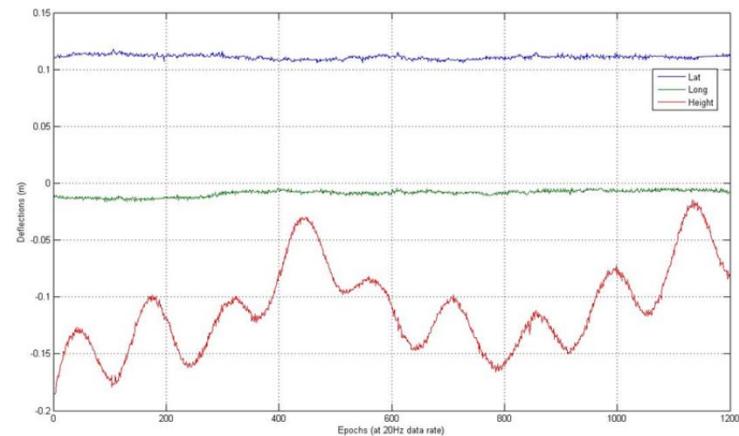

Movements location A, 40 min period

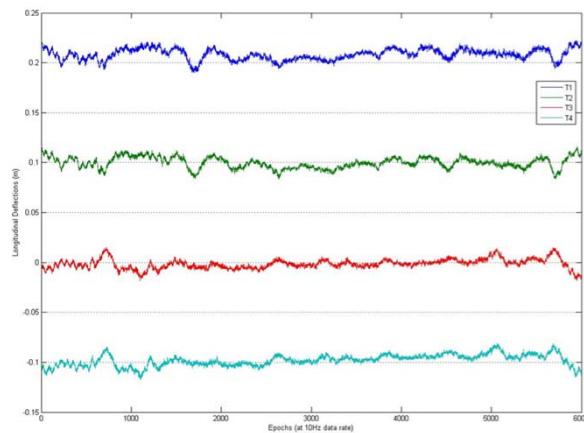

Location B 10 mins

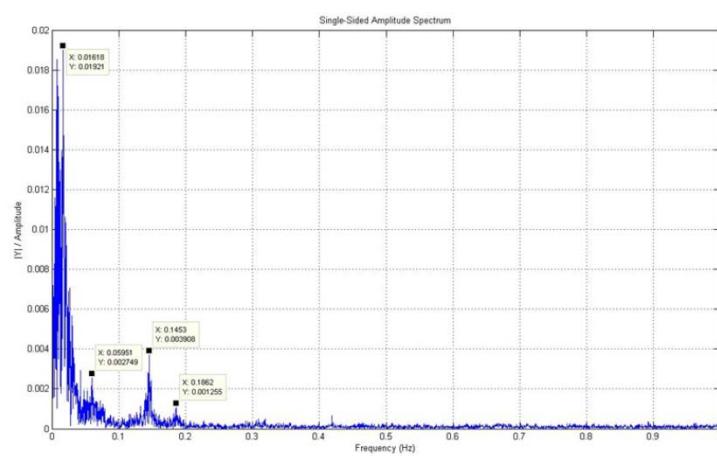

Location B 1 min

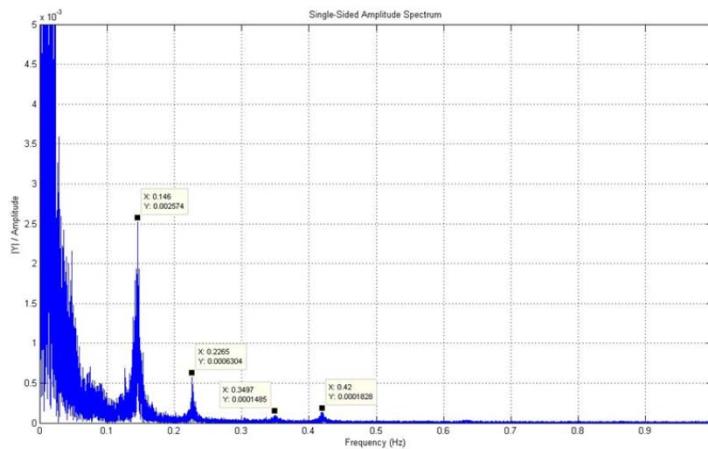

Tower Longitudinal movements, 10 mins

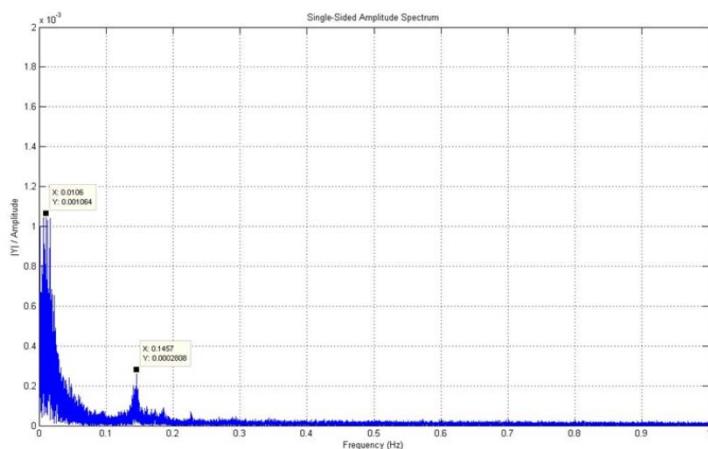

Location A spectral analysis

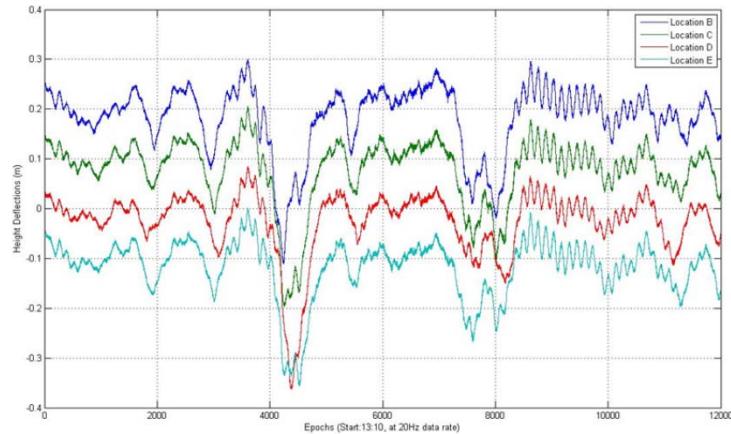

Location B spectral analysis

Tower T1 spectral analysis

Height 4 locations 10 mins

Conclusions

- Valuable monitoring tool and technique
- Forth and Severn suffer wire breaks
- Long term monitoring?
