

Towards sustainable urban land use – a methodological design for implementing socio-ecological targets into the strategic planning of cities in Germany

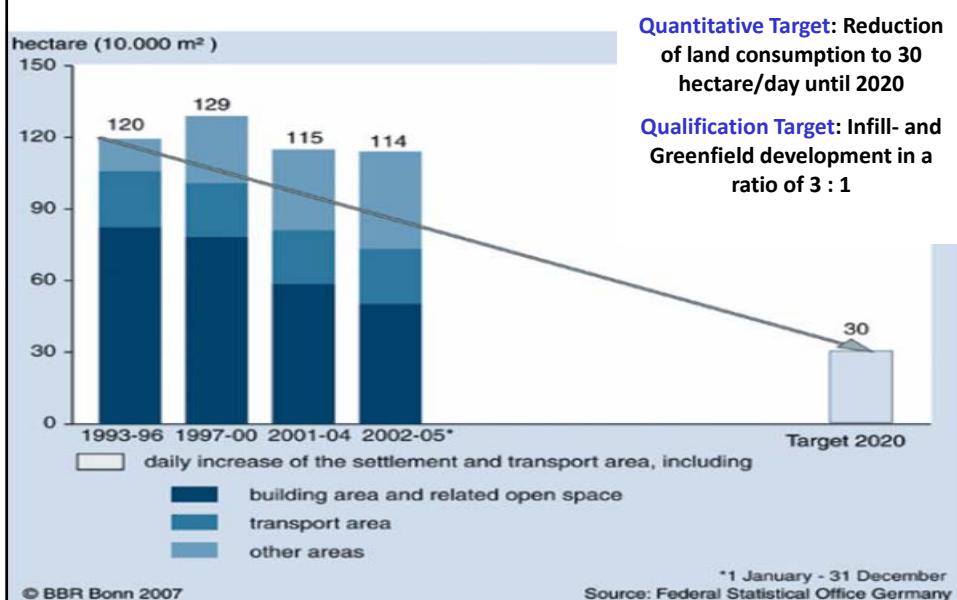

Sophie Schetke & Theo Kötter
Institute of Geodesy and Geoinformation

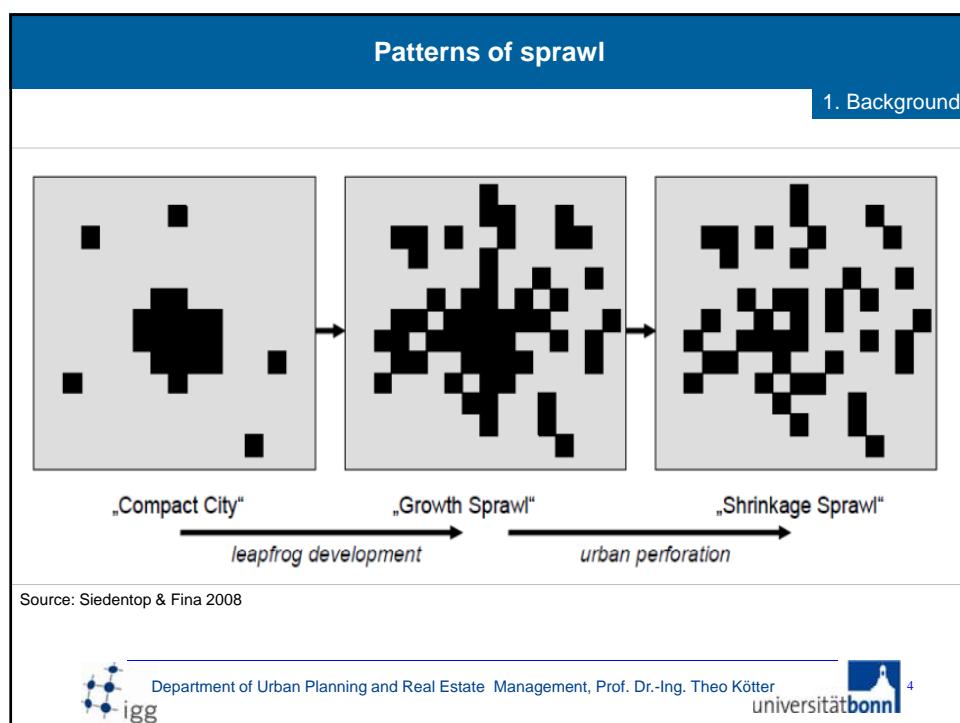

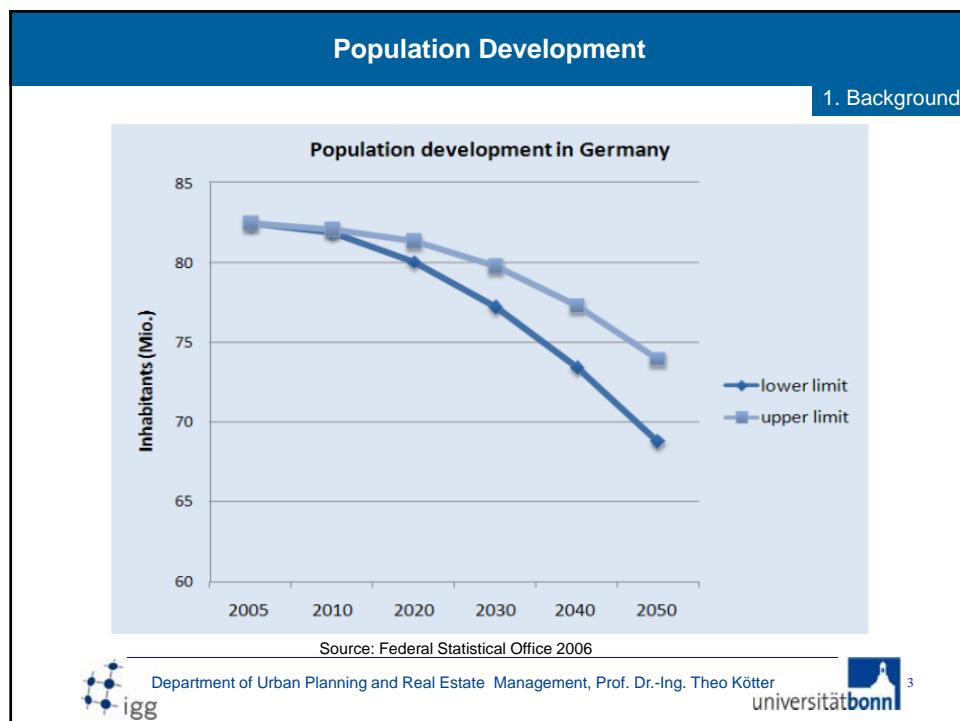

Dagmar Haase
Department of Computational Landscape Ecology

Trends and Drivers of Land Consumption In Germany

1. Background

The Research-Project FIN.30 (“Flächen intelligent nutzen”)

2. FIN.30

- **Goals of FIN.30:**

- Preserve actionability of cities despite of monetary deficits during the provision of building land
- Reclaim steering ability of the communal development
- Adjust future settlement development to the goals of sustainability (ecologic, social, economic)

Parts:

1. Multicriteria Decision Support System (MCA-DSS)
2. Cost-oriented allocation tool to foster for a re-development of residential areas inside the cities

Scale:

- Strategic level of preparatory land use planning (1:15.000; 15-20 years)

Department of Urban Planning and Real Estate Management, Prof. Dr.-Ing. Theo Kötter

5

FIN.30: Targets of the MCA-DSS

2. FIN.30

Conceptual

Planning-oriented operationalization of „sustainability“

Qualitative assessment of sites versus quantitative political targets

Transparency on the use of natural resources, of infrastructure and economic resonable site-development

Individual indicator-weighting
➢ decision relevance &
➢ adaptation to local specifications

Assessment of future housing-sites on the level of preparatory land-use planning

Methodology

Reasonable number of indicators for each dimension

Based on communal data to enhance acceptability and comprehensibility

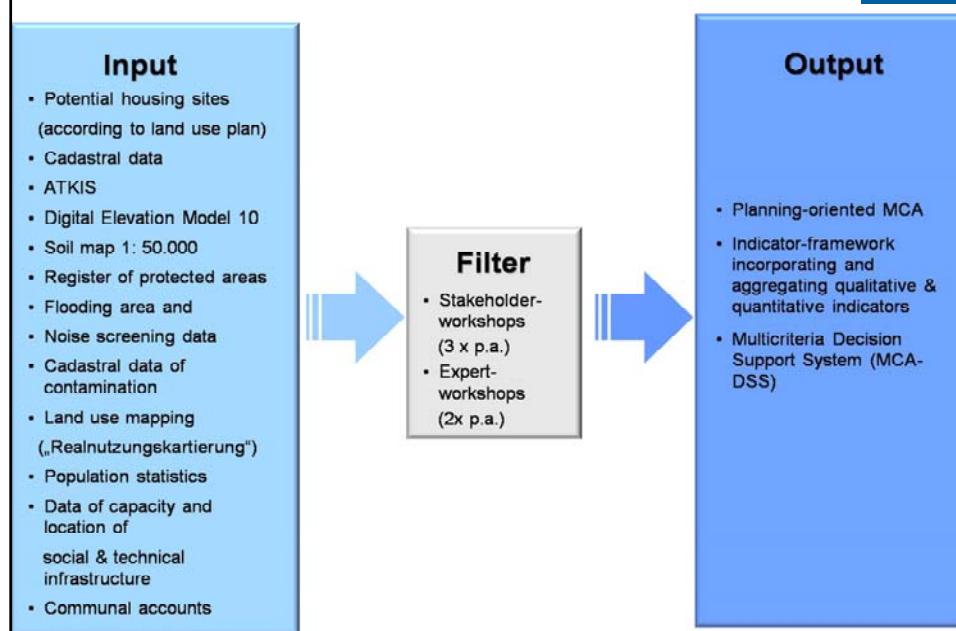

Department of Urban Planning and Real Estate Management, Prof. Dr.-Ing. Theo Kötter

Conclusion					
<ul style="list-style-type: none"> Elaboration of a practicable MCA-DSS containing decision-relevant indicators Integration of all dimensions of sustainability Integration of qualitative and quantitative indicators to one final statement Multidimensional assessment of the contribution of both of infill- and greenfield development to a sustainable settlement-development
